

Check list for electricians

Golden rules for professional electricians

- 1** Isolate the electrical supply from all energy sources, also with low voltage
- 2** Secure against re-connection of electrical supply and carry out locking
- 3** Verify with all possible energy sources that the installation is de-energised
- 4** Carry out temporary earthing from all possible energy sources
- 5** Protect and mark the work area
- 6** Ensure electrical safety in the work area and communicate about it to everyone
- 7** Demonstrate your professional skills by complying with these rules and monitoring that they are being observed
